API's

PART 1: SWAPI

1. http://swapi.dev/api/people/4
2. http://swapi.dev/api/planets/2
3. http://swapi.dev/api/starships/5/
4. http://swapi.dev/api/people/2 , http://swapi.dev/api/species/2
5. http://swapi.dev/api/people/10 , http://swapi.dev/api/films/4 , http://swapi.dev/api/films/5 , http://swapi.dev/api/films/6 , http://swapi.dev/api/films/1 , http://swapi.dev/api/films/2 , http://swapi.dev/api/films/3 ,
6. https://swapi.dev/api/starships/?search=millennium

PART 2: Social Mountain

1. It accepts a body. It expects text.
2. It returns an array.
3. /api/posts/555
4. 409, 404, 400
5. https://practiceapi.devmountain.com/api/posts,
   {
        "text": "name"
   }
6. https://practiceapi.devmountain.com/api/posts/?id=6709
7. https://practiceapi.devmountain.com/api/posts/filter?text=blue
8. application/json; charset=utf-8
9. Request body missing required text. User didnt send a body.
10. When you make a GET request with a query, you are still hitting the endpoint to get all the posts. However, the query you send is extra information that is unnecessary to the route, so it still returns all of the data.
